1
Two prompts, one label apart
DONOR RUN
City A · ZOR City B · KIV
City C · ZOR
identical except for
ZOR / KIV
RECIPIENT RUN
City A · ZOR City B · KIV
City C · KIV
2
The patch
City C label-token states
layer 0
layers 19–21
layer 39
write the donor's vectors over the recipient's
$h_{\ell,t} \leftarrow h^{\text{donor}}_{\ell,t}$ for $\ell \in \{19, 20, 21\}$
all other layers and positions run unchanged
City C label-token states
the recipient's own,
unchanged
replaced
recomputed from
the patched states
3
What the recipient then says
before: “City C shares the KIV label with City B”
after: “City C shares the ZOR label with City A”
4
Implied responsiveness of City C, in poll points per news point
KIV reference (City B) 0.52
ZOR reference (City A) 1.13
before 0.62
after 0.92
