

Current Figure 1

FORECASTING WITH A WORLD STRUCTURE

YOU OBSERVE: TWO HEADS IN TWO FLIPS AT
A CARNIVAL GAME

FORECAST: What is $P(\text{heads})$ on the next coin flip?

DIFFERENT APPROACHES

$P(\text{heads})$

NAÏVE: Assume a fair coin; the setting is just noise. **0.5**

FREQUENTIST: Consider only the two flips you saw. **1.0**

JUDGMENTAL FORECASTING: Carnival coins can be rigged, but two heads could likely be a fair coin. *uses world knowledge and the two flips* **≈ 0.68**

Revised draft

PAY TO PLAY. TAILS WINS A PRIZE.

YOU
Is it worth playing?

OPERATOR
Earns when you lose.

YOU OBSERVE:  

FORECAST: What is $P(\text{heads})$ on the next flip?

DIFFERENT APPROACHES

$P(\text{heads})$

NAÏVE: Assume a fair coin; the setting is just noise. **0.5**

FREQUENTIST: Consider only the two flips you saw. **1.0**

WHAT THE LLMs SAID:
The carnival coin may favor heads.
Two flips alone are weak evidence. **≈ 0.68**
