

## JUDGEMENTAL FORECAST SET-UP

### 1 The question

**Will Trump order a federal review of AI-model releases by June 30, 2026?**

Sample open Polymarket events.

POLYMARKET PRICE ON  
JUN 11, 2026  $P(\text{YES}) = 0.38$

### 2 Agent event model

AGENT · **WEB SEARCH ON**

On Jun 11, 2026 each agent asked to make a **judgemental forecast** w/ a self-defined event model + web search for evidence:

**KEY ACTORS** Trump · frontier labs  
**MECHANISM** review models' *public release* (not procurement) + prior only a *voluntary* framework

INITIAL AGENT FORECAST  
 $\hat{p} = P(H_1) = 0.46$

## UPDATE JUDGEMENTAL FORECAST WITH FICTIONAL EVIDENCE

### 3 Manufacture evidence

A **generator model** writes **fictional** news. Three directions:

**pro- $H_1$**  “agencies finalize the review framework”

**anti- $H_1$**  “White House rules out any June order”

**orthogonal** “data-center surge strains the grid”

COUNTERFACTUAL  
**9 packets per question**

### 4 Coherent update

The agent sees **one packet at a time** with **web search off**, reasoning from evidence.  
shown: the pro- $H_1$  packet

**0.46 → 0.67**

**+21 pp**  $P(H_1)$  and  $\hat{p}$  rise together

**COHERENT** if the hypothesis update reaches the forecast
